ALL ABOUT

BLENDED EMOTIONS

Created by: Veronica Moore

This infographic will mainly focus on how you can determine if a disabled and a younger child is expressing one of the many blended emotions that each individual person can express.

Blended emotions can be challenging to determine but as long as you know what blended emotions truly mean which are expressions that reflects more than one emotion at a time.

An individual will be able to determine a specific emotion or a blended emotion depending on what the individual disabled or young person is doing in a specific time or their environment.

They is a key vocabulary word that helps us understand and helps us interpret facial expression and any other non-verbal behavior which is "decoding" . It helps us determine what the emotion or blended emotion that each individual person is showing based on their specific circumstance and using decoding will help with trying to figure out what they are trying to express. We can see this as demenstrated a little bit in the picture above where it shows an older person instructing and speaking to a child.

In this example with the picture it shows us that not only does young disabled people cause us to wonder what their emotion or blended emotion is but it also causes us to wonder what the emotion or blended emotion is in older disabled or elderly in general because it is harder to figure out what they are experiencing.
